👤 SUMMARY

Jesse is a self-motivated full stack software engineer, architect, and team lead with a wide range of skills and experiences in different tech stacks, language, platforms, and frameworks. As a self-taught engineer, Jesse has a unique ability to learn new technologies, allowing him to rapidly gain practical understandings in highly complex systems and swiftly become an effective, value-adding team member. Additionally, Jesse has a rare theoretical background in philsoophy, which allows him to strike an elegant balance between technical software design and pragmatic implementations to address strategic business needs. Lastly, with an understanding of collective action, Jesse has a proven track record of agile project planning, decomposing business requirements, and managing teams to meet rigid deadlines.

💼 EXPERIENCE

Rackspace Technology Software Developer III | remote   2018-present

- Lead architect and developer in Managed Public Cloud for Azure offering responsible for mentoring, coaching, and managing numerous projects that enable thousands of globally distributed rackers the ability to serve customers
- Built highly scalable microservices and serverless applications *in AWS and Azure* that enabled resell, billing, and management of Azure infrastructure using NodeJS, ReactJS, Terraform, and Jenkins DevOps
- Migrated monolithic Azure App Services to serverless and containerized AWS solution using Lambdas, Step Functions, and Fargate
- Planned, successfully executed, and delivered next generation automations and tooling using a proven agile development methodology
- Led countless requirements gathering sessions with Product Owners and end-users to understand business needs, write technical specifications, and prototype solutions influence the direction of the Azure offering
- Created dozens of Bash and Node scripts for handling a variety of business and compliance tasks

Presence LLC Senior Software Developer | St. Petersburg, FL   2016-2018

- Built central form generation framework and interactive client-side builder allowing for completely custom automated data entry and entity automations that served as the foundation for all content in SaaS for student affairs professionals that managed over 100K yearly events for college campuses around the US
- Created .NET Core microservices using C#, AngularJS, CosmosDb, and Azure App Services
- Created JavaScript UI Grid framework allowing for vertical-scaling grid elements allowing for stackable, incongruent grid layouts
- Built user-programmable logic framework for developing highly complex forms for entity creation allowing for over 40+ custom fields, widgets, and complex automations to streamline campus processes and student retention practices

Bayshore Solutions Senior Software Developer | Tampa, FL   2015-2016

- Built custom web applications using .NET/C# for businesses in the Tampa Bay area, meeting with clients to determine business requirements
- Modernized traditional software development shop to run in a more agile manner
- Responsible for interfacing with customers, conducting strategic requirements gathering meetings, and proposing software architecture

AMPACC Law Group IT Specialist | Mountlake Terrace, WA   2012-2015

Responsible for all, base-metal, and on-prem in-house IT operations including maintaining internal network domain

Created in-house Patent Case Management system, which saw two iterations over its life. First as a monolithic .NET MVC web application, the second as a service-oriented WPF native-Windows application integrating with SAML SSO.
